About Me

Full-stack web developer with hands-on experience building production features for large-scale web platforms. Strong background in React/Next.js and Vue/Nuxt, TypeScript, Node.js, and modern cloud & storage systems. Experienced in designing and implementing complex frontend UX, server-side actions, real-time flows, and scalable backend integrations.

Skills

- Next.js (Server & Client Components)
- React.js
- Vue.js
- Nuxt.js
- Three.js
- Node.js, Express.js, Laravel (PHP)
- TypeScript & JavaScript
- Databases: Mongo DB & MySQL
- Cloud & Storage: Firebase & AWS S3
- Git, Docker, Firebase emulators, CI-friendly workflows
- Strong TypeScript typing, debugging, and system design

Education

Bachelor of Science in Computer Science

University of Central Punjab

2019 - 2023

AI Agricultural Robot & Robot Web Portal: Led development of an AI-based agricultural robot for automated pesticide spraying (image recognition & ML) plus a React/Node web portal for real-time monitoring and remote control. • Integrated PLC and DC motors for reliable movement; implemented image recognition for spraying decisions. • Built secure web portal with geolocation tracking, live telemetry, and user feedback mechanisms

Experience

HealthShared - Health Community Platform

Full-stack developer

May 2025 - Present

Built and shipped production-level platform features across frontend and backend, improving user engagement, system reliability, and scalability.

- Engineered complete season-based questionnaire system with progress tracking, validation logic, and dynamic UI rendering.
- Implemented gamification architecture (badges, achievements, leaderboards) with optimized state + database sync.
- Developed secure server-side actions & API logic with strict TypeScript typing and data validation.
- Solved complex SSR hydration + lifecycle issues, improving performance and stability across pages.
- Designed Firestore schema updates & backward-compatible migrations without breaking live data.
- Built reusable UI systems, guided tours, and rich text editor integrations to enhance UX and reduce dev time.
- Ensured scalable architecture using modular components, clean state management, and optimized queries.

Tech: Next.js, React, TypeScript, Firebase, Tailwind, Zustand

Lyfetymes - Event Management Platform

Full-stack developer

Oct 2025 - Present

Designed and delivered core platform architecture for a customizable event-management system used to create, manage, and monetize celebration templates.

- Architected a dynamic template engine enabling admins to build reusable event templates with global + per-event styling overrides.
- Built full RSVP management system with validation, state handling, and structured data flows.
- Integrated secure payment system for template sales with transaction handling and error states.
- Implemented scalable media pipeline using cloud storage for optimized upload, retrieval, and performance.
- Resolved complex Vue reactivity edge cases and refactored permissions into scalable RBAC architecture.
- Improved system maintainability via modular components, reusable logic layers, and clean API integrations.

Tech: Vue.js 2, Laravel, MySQL, AWS S3, Stripe API, reCAPTCHA v3

Quartrly - Quarterly Scheduling App

Full-stack developer

Dec 2025 - Present

Built a scalable scheduling platform with real-time availability logic and production-ready architecture.

- Designed time-slot engine supporting 15-minute interval scheduling with validation and conflict prevention logic.
- Engineered resilient multi-step onboarding flow with crash-recovery state persistence and route-level access control.
- Implemented profile-completion tracking system to improve onboarding completion rates.
- Fixed and optimized cloud image upload pipeline, improving reliability and file handling.
- Containerized database environment for consistent development and deployment setups.
- Structured backend APIs for performance using caching and optimized queries.

Tech: React, Redux, Node.js, Express, MongoDB, Redis, AWS S3, Docker, Material-UI
